Conclusion

$$I + jQ = e^{j(\Delta\omega t + \varphi)}$$

with

$$\varphi = \frac{n\pi}{2}, n \in \mathbb{N}$$

$$\Rightarrow (I + jQ)^4 =$$

$$e^{j(4\Delta\omega t + 4\varphi)}$$

$$e^{j(4\Delta\omega t + 0[2\pi])}$$

$$e^{j(4\Delta\omega t)}$$

Data collection: QPSK modulation

Did we collect useful information ?

- Constant block size
⇒ repetition of the
synchronization header
1ACFFC1D^{3 4}
- autocorrelation peaks
every 16384 samples

2.5.2.1 Bit Domain Frame Synchronization

The Consultative Committee for Space Data Systems has adopted the 32-bit ASM shown in Figure 4 for synchronization in the bit domain. The pattern is represented in hexadecimal as 1ACFFC1D but any pattern having a length of 8 to 64 bits such as the Inter-range Instrumentation Group (IRIG) patterns can be accommodated.

Figure 4. CCSDS Recommended 32-bit Attached Synchronization Marker

Conclusion

Assembly of JPEG pictures for create one large image

- JPEG images with varying size depending on the encoded features
- one JPEG image can span multiple frames
- Huffman encoding + Discrete Cosine Transform + Quality quantization

Use existing library⁹ ¹⁰ to decode JPEG

```
#include "meteor_image.h"

using namespace gr::starcoder::meteor;

int main(int argc, char **argv)
{int fd, len, k, quality=77;
 unsigned char packet[1100];
 imager img=imager();

 if (argc>1) quality=atoi(argv[1]);
 fd=open("jpeg.bin", O_RDONLY);
 len=read(fd, packet, 1100);
 close(fd);
 img.dec_mcus(packet, len, 65, 0, 0, quality);
}
```

Conclusion

With JPEG quality (Q coefficient)

Reference picture decoded by medet at
https://github.com/artlav/meteor_decoder

Conclusion

- Understanding all decoding steps, from I/Q coefficient to JPEG image assembly
- Processing method valid for all space communication compliant with CCSDS
- SDR for practical applications of basic theory (QPSK, FEC, lossy compression)

Conclusion

- **What:** 1-day oral presentations & demos, 1-day tutorials (Analog Devices PlutoSDR)
- **When:** 17-18 June 2019
- **Where:** Besançon, France (2.5 hour from Paris by high-speed train)
- Call for contrib.: March 21
- Registration (free): May 1

A banner for the European GNU Radio Days 2019 conference. The top half shows a scenic view of Besançon, France, with its historic architecture and a prominent church spire. A QR code is in the top right corner. The bottom half is a dark grey banner with the event title 'European GNU Radio Days 2019' in large, stylized letters. To the right of the title are logos for 'PlutoSDR tutorial', 'ANALOG DEVICES', 'ROHM & SCHAFFNER', 'femto-st', 'FIRST TF', 'Gentium', 'Citi Lab', 'GDR', and 'OpenSDR'. Below the title, the text 'Call for contributions:' is followed by a list of topics: 'Software Defined and Cognitive Radio', 'RF design (frontend, embedded systems)', 'RADAR design', 'GNU Radio blocks design', and 'Satellite and GNSS applications'. At the bottom, the dates 'June 17 & 18, 2019 in Besançon, France' and the website 'gnuradio-fr-19.sciencesconf.org' are displayed. Logos for 'DIAMANT', 'ANALOG DEVICES', 'INTEL', 'ARM', and 'RECCABLE' are at the very bottom.
